

Improving Service Delivery for High Need Medicaid Clients in Washington State Through Data Integration and Predictive Modeling

David Mancuso, PhD

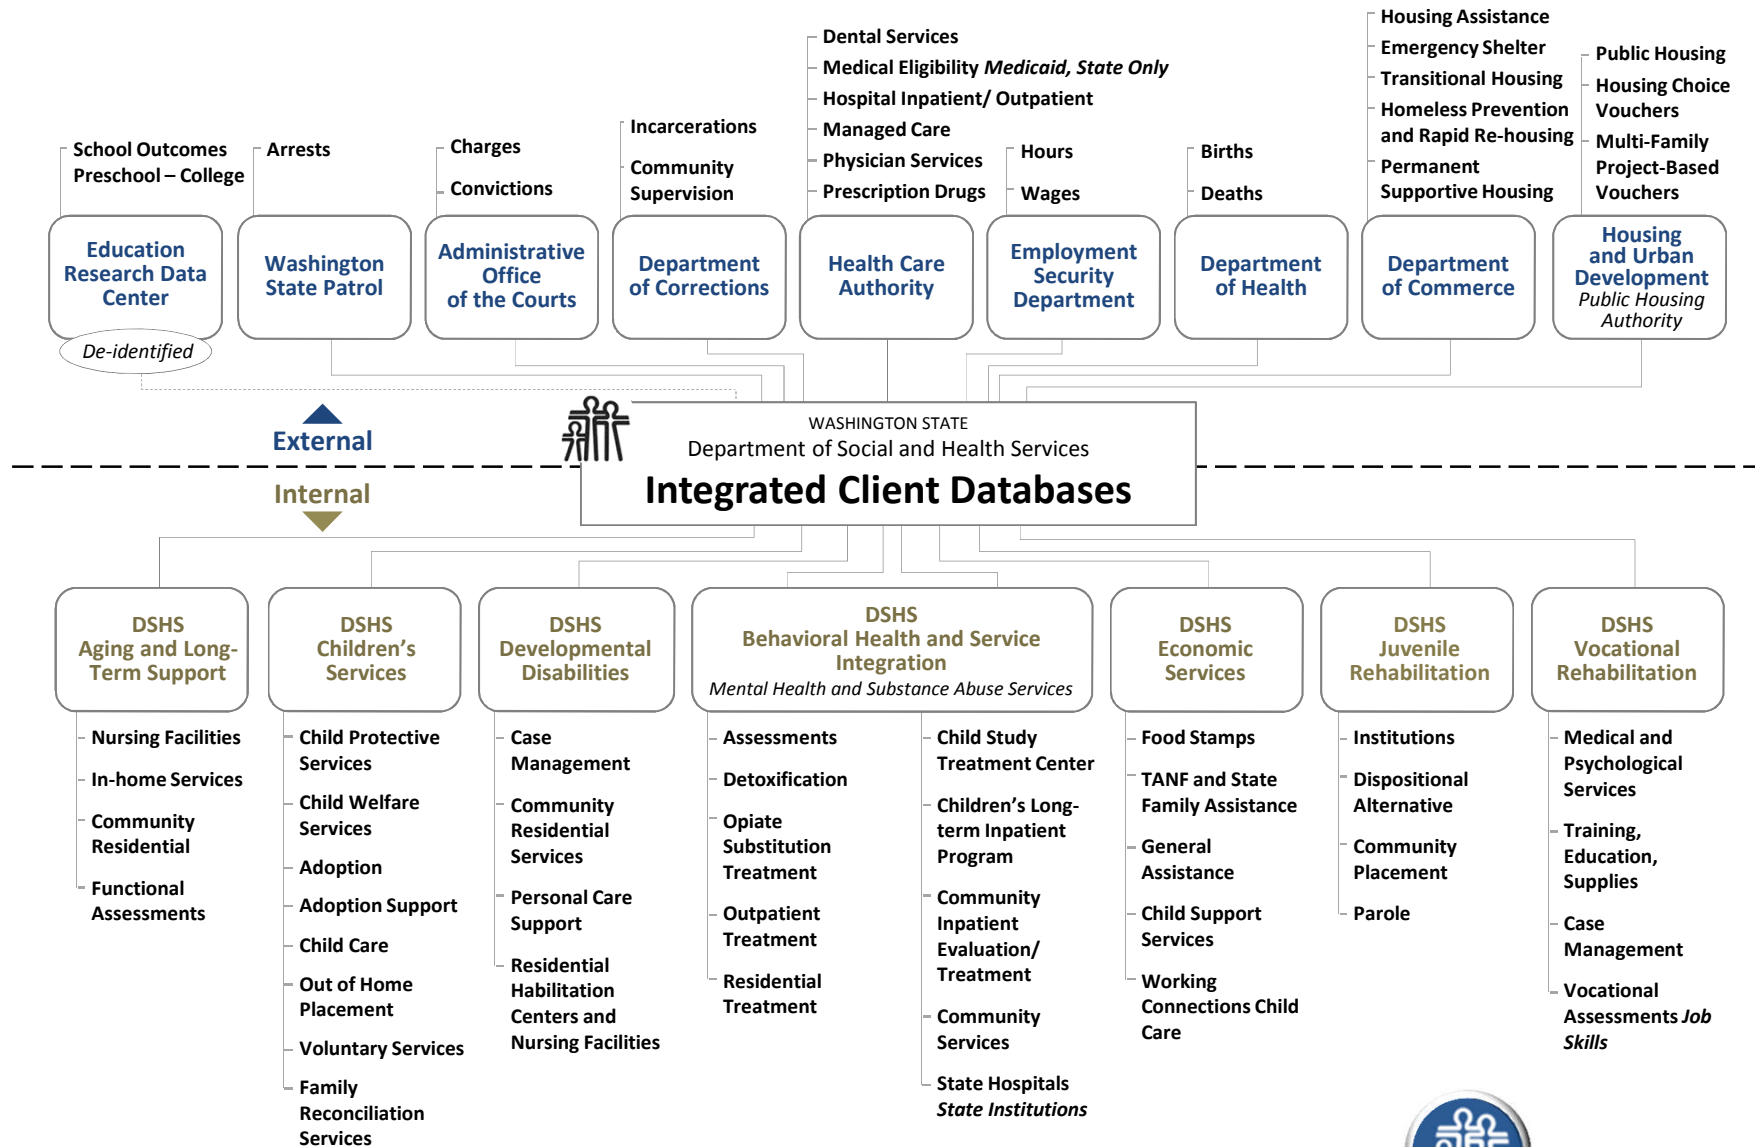

Analytics in the Social and Health Service Environment

- ▶ **Program costs are often driven by a small proportion of patients with multiple health conditions**, often exacerbated by mental illness, substance use disorders, cognitive limitations or functional impairments
- ▶ **High-cost clients are often served in multiple Medicaid-funded delivery systems** (medical, long-term care, mental health, substance abuse, developmental disabilities)
- ▶ **High-cost clients often have significant social support needs** such as the need for housing or employment support, or interventions to reduce the risk of criminal justice involvement
- ▶ **Persons dually eligible for Medicare and Medicaid comprise a disproportionate share** of high-risk, high-cost Medicaid beneficiaries
- ▶ **Increased emphasis on quality/outcome measurement and performance-based payment structures**
- ▶ **States need analytic capability that goes beyond traditional data warehousing and business intelligence applications**

Use of integrated data for performance measurement:

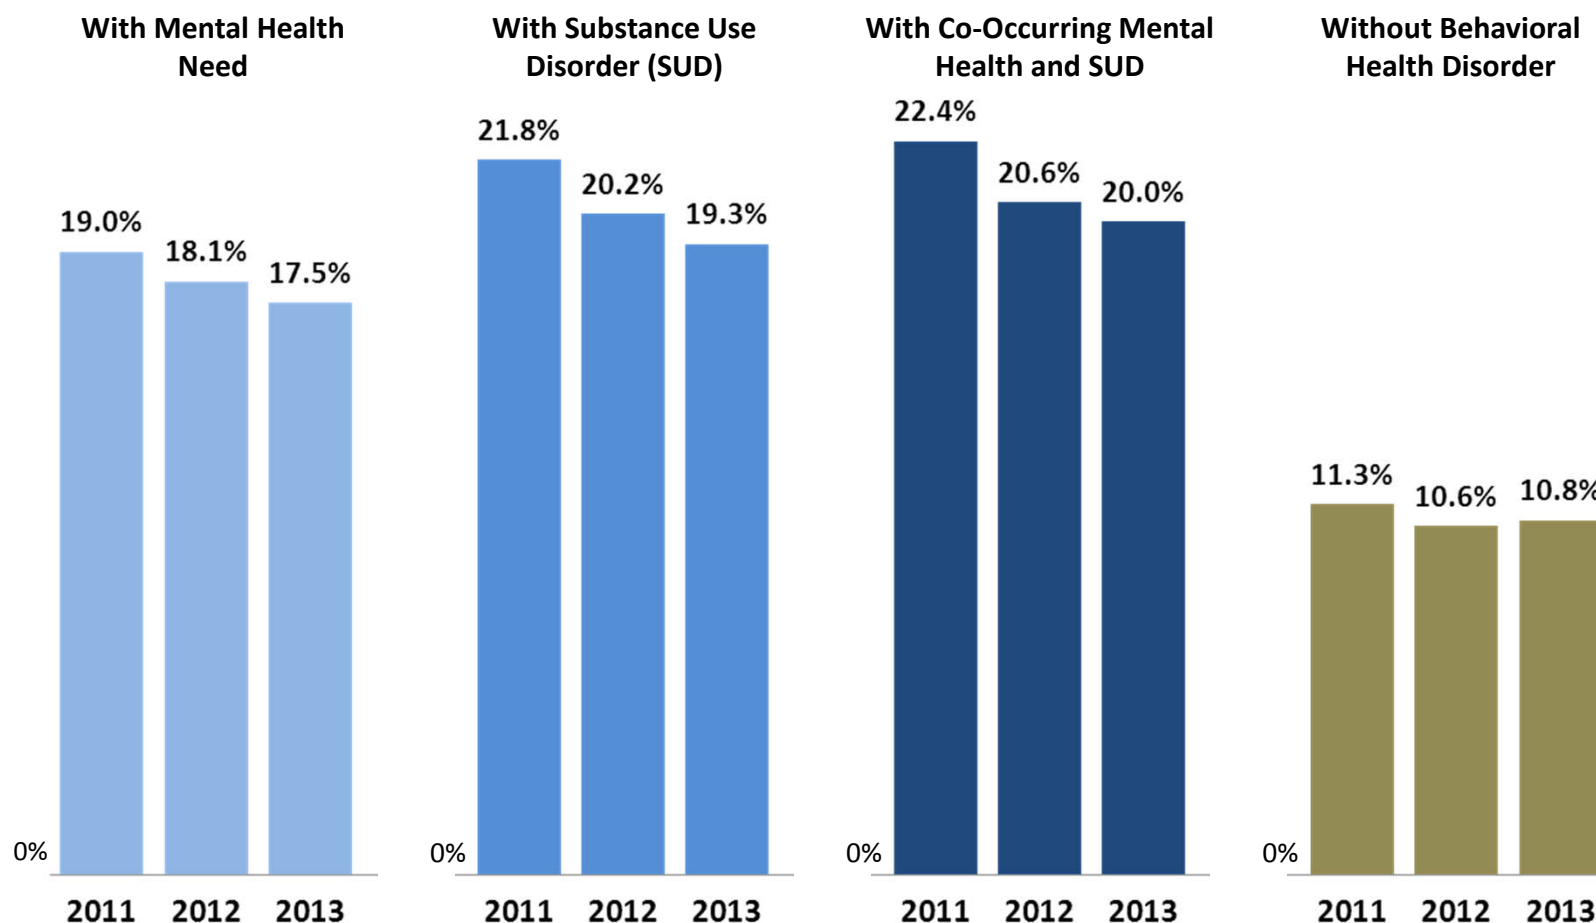

- ▶ Health quality and outcome metrics
- ▶ Social well-being metrics

All-Cause 30-day Hospital Readmission Rate

DISABLED MEDICAID ADULTS AGES 18 – 64 (EXCLUDES DUALS) • HEDIS-PCR

► **Individuals with behavioral health conditions have higher rates of readmission**

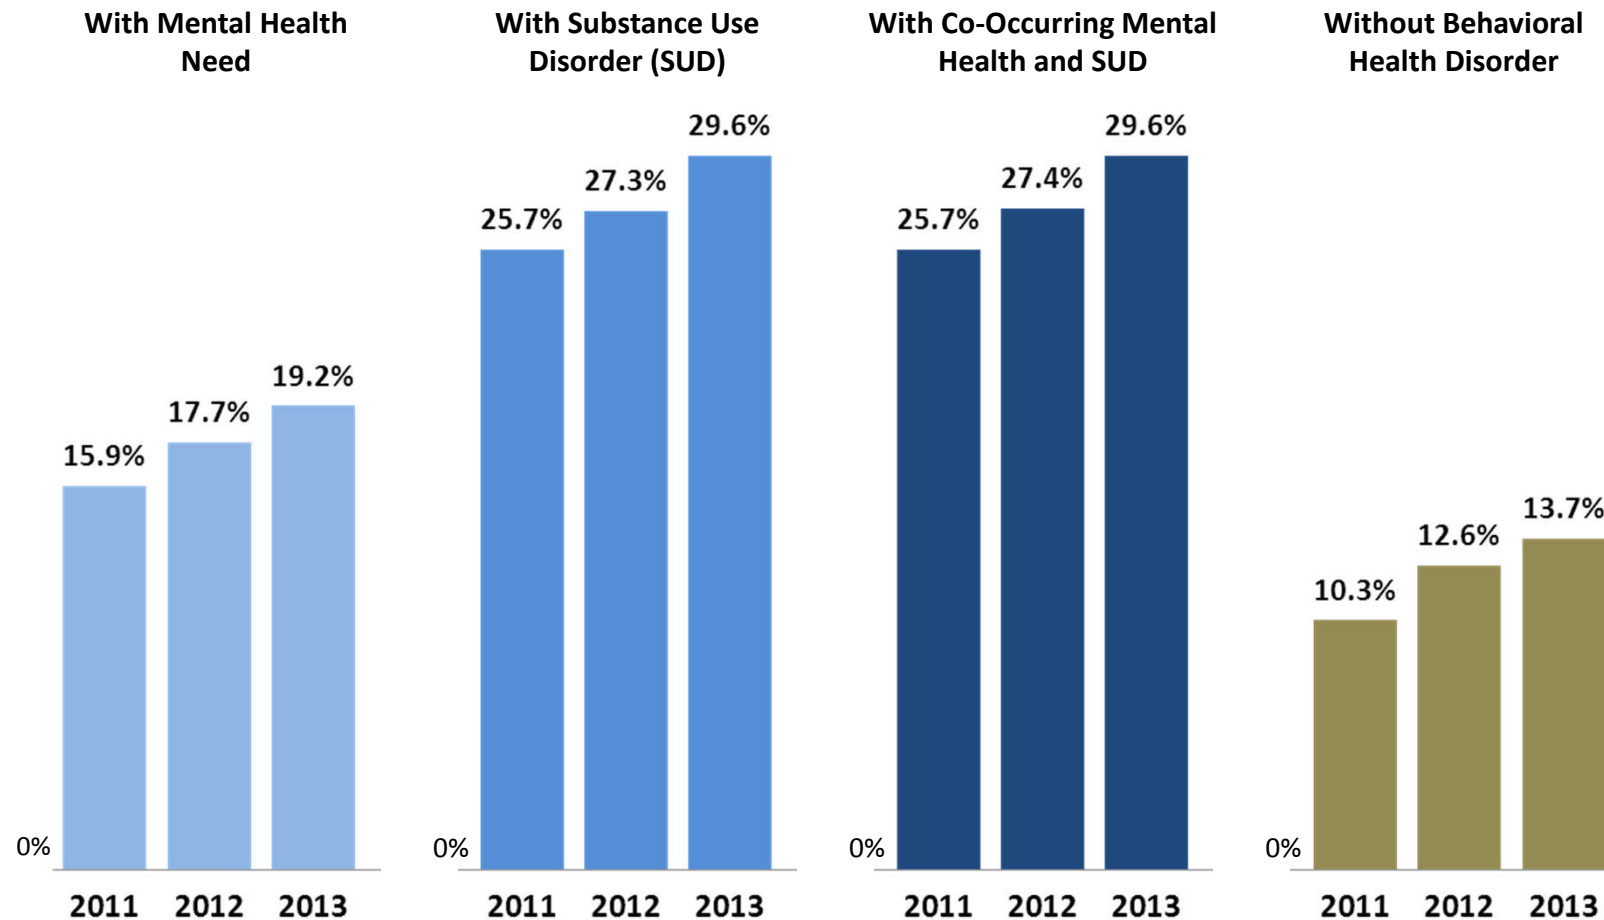

SOURCE: DSHS Research and Data Analysis Division, *Managed Medical Care for persons with Disabilities and Behavioral Health Needs: Preliminary Findings from Washington State*, paper in progress.

Percent Homeless

DISABLED MEDICAID ADULTS AGES 18 – 64 (EXCLUDES DUALS)

► **Individuals with behavioral health conditions are more likely to be homeless**

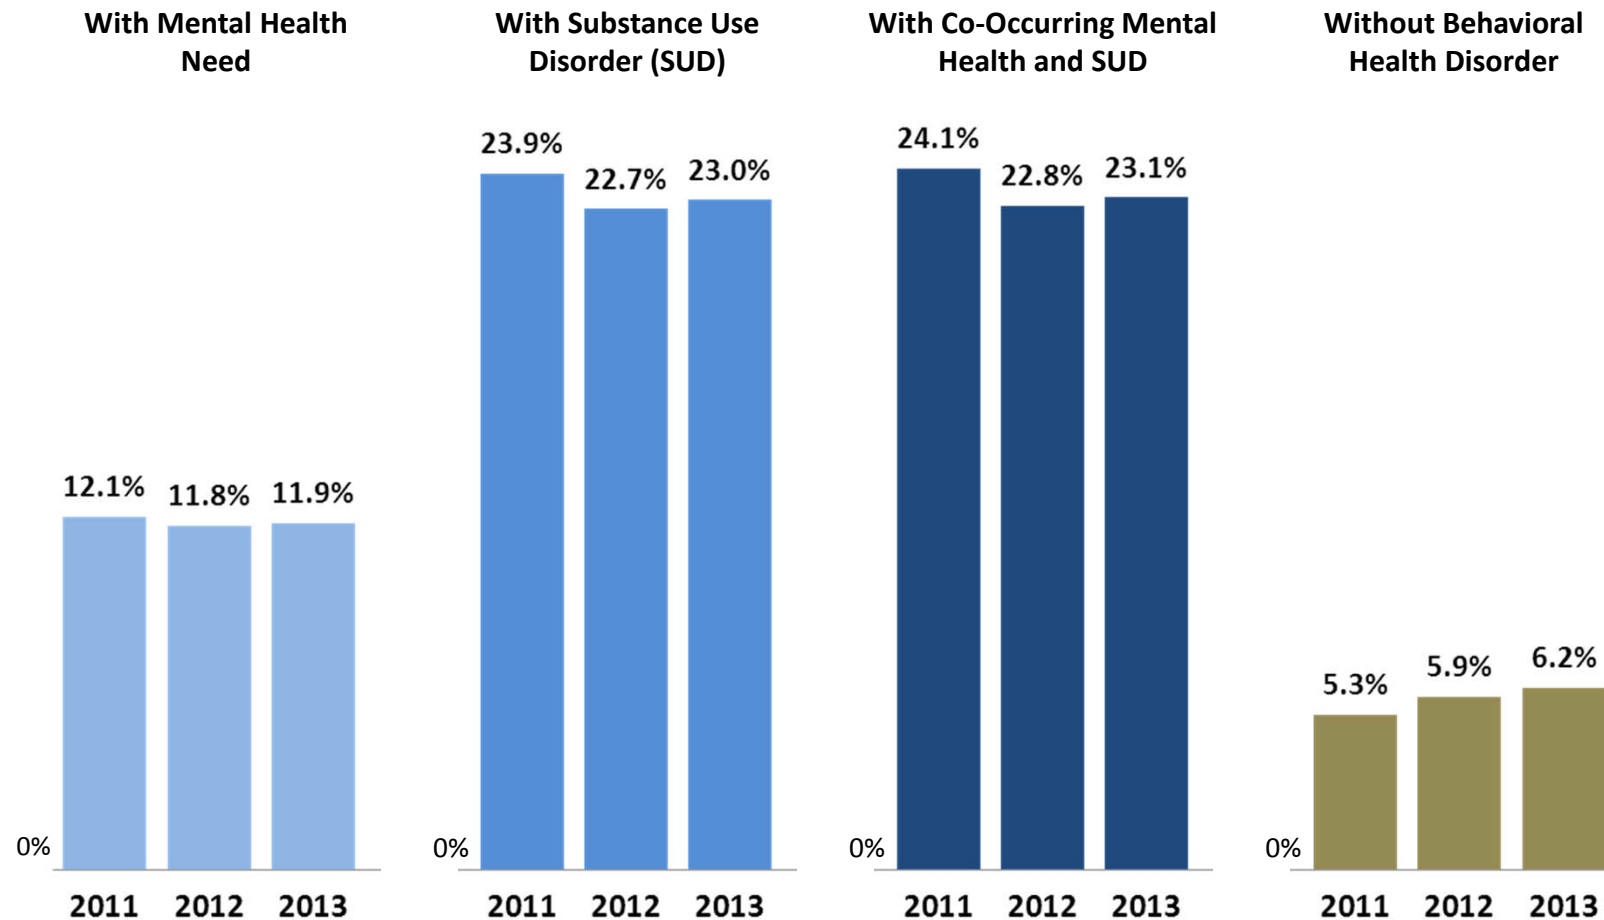

SOURCE: DSHS Research and Data Analysis Division, *Managed Medical Care for persons with Disabilities and Behavioral Health Needs: Preliminary Findings from Washington State*, paper in progress.

Percent with Arrests

DISABLED MEDICAID ADULTS AGES 18 – 64 (EXCLUDES DUALS)

► **Individuals with substance abuse issues are much more likely to be arrested**

Using integrated data in predictive modeling for care management

- ▶ PRISM
- ▶ TANF PRISM

PRISM Screens

Risk Factors	Key medical and behavioral health risk factors
IP Risk Model	Prospective hospital admission risk model
Adherence	Medication adherence dashboard
Eligibility	Detailed eligibility and demographic data
Claims	All medical claims and encounters
Office	Office visits
Rx	Prescriptions filled
IP	Inpatient admissions
ER	Outpatient emergency room visits
LTC	Long term care services
SNF	Skilled nursing facility services
Lab	Laboratory
Providers	Provider list with links to contact information
SUD	Substance use disorder treatment
MH	Mental health services

Uses of PRISM

- ▶ **Triaging high-risk populations** to more efficiently allocate scarce care management resources
- ▶ **Intuitive and easily accessible source of patient health and social service data** for clinicians and case managers
- ▶ **Informing care planning and care coordination for clinically and socially complex persons**
- ▶ **Identification of child health risk indicators for high-risk children** (mental health crisis, substance abuse, ED use, nutrition or feeding problems)
- ▶ **Identification of behavioral health needs** (redacting information where required by state or federal law)

Getty Images, iStock

Uses of PRISM *continued*

- ▶ **Identification of other potential barriers to care:**
 - Patient's housing status (e.g., whether they are homeless)
 - Hearing impairment
 - Non-English primary language
- ▶ **Access to treating and prescribing provider contact information for care coordination**
- ▶ **Creation of child health summary reports for foster parents and pediatricians**
- ▶ **A source of regularly updated contact information from the medical eligibility determination process** to support patient outreach and engagement efforts

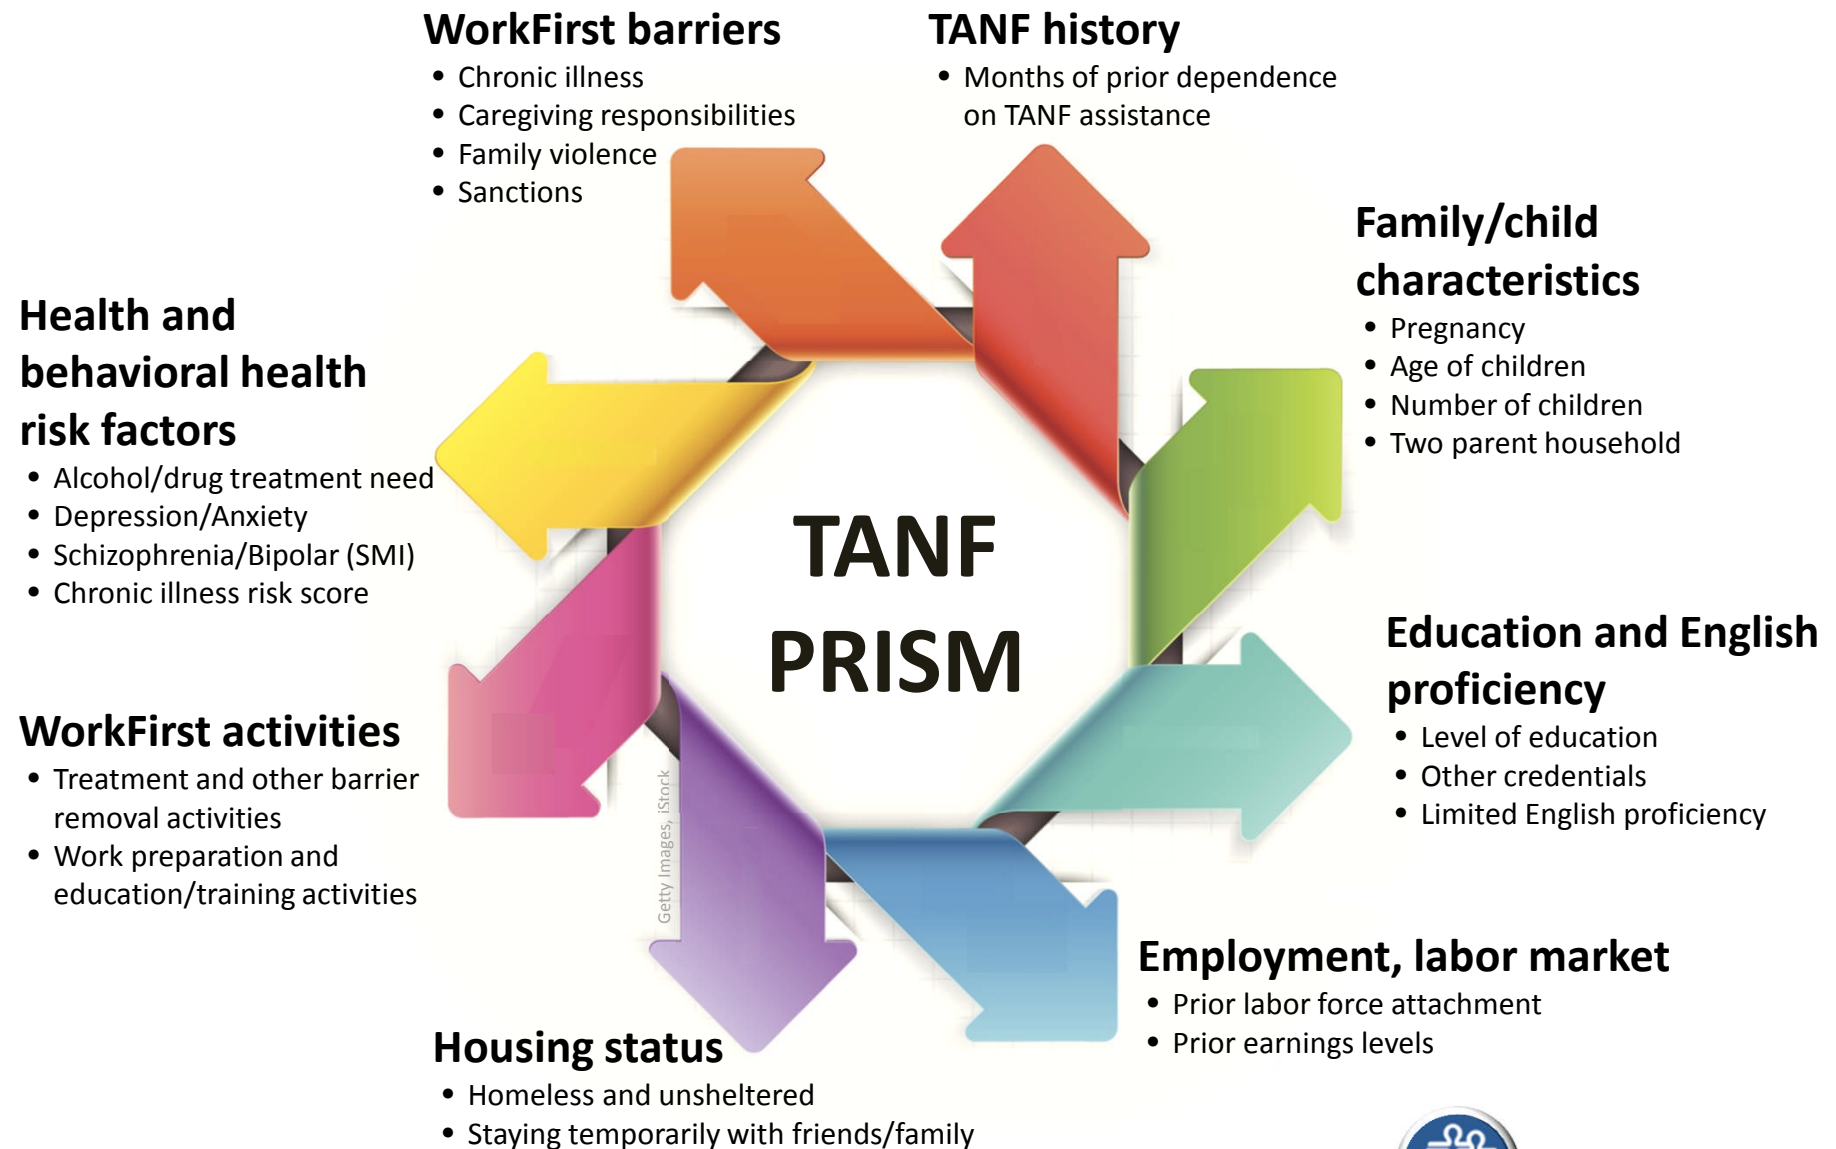

Uses of PRISM *continued*

- ▶ Medication adherence monitoring
- ▶ Identification of potential narcotic drug-seeking behavior
- ▶ Identification of psychotropic medication polypharmacy patterns associated with overdose risk
- ▶ Monitoring health plan compliance with contractual requirements
- ▶ Plan- and provider-level quality improvement program support
- ▶ Service authorization and utilization review
- ▶ Medical evidence gathering for determining eligibility for disability programs

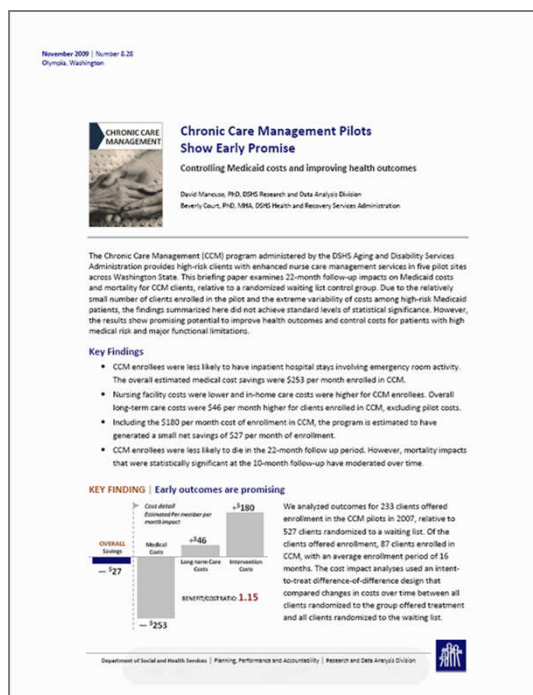

Employability Risk Scoring: Strengths and Challenges

Early returns show promise

► Chronic Care Management evaluation

- Modest net savings
- Driven by reduced Hospital IP and SNF costs
- Reduced mortality
- Increased patient satisfaction

► Cost Detail

Estimated per member per month impact

OVERALL Savings

– \$27

Medical Costs

– \$253

+ \$46

Long-term Care Costs

+ \$180

Intervention Costs

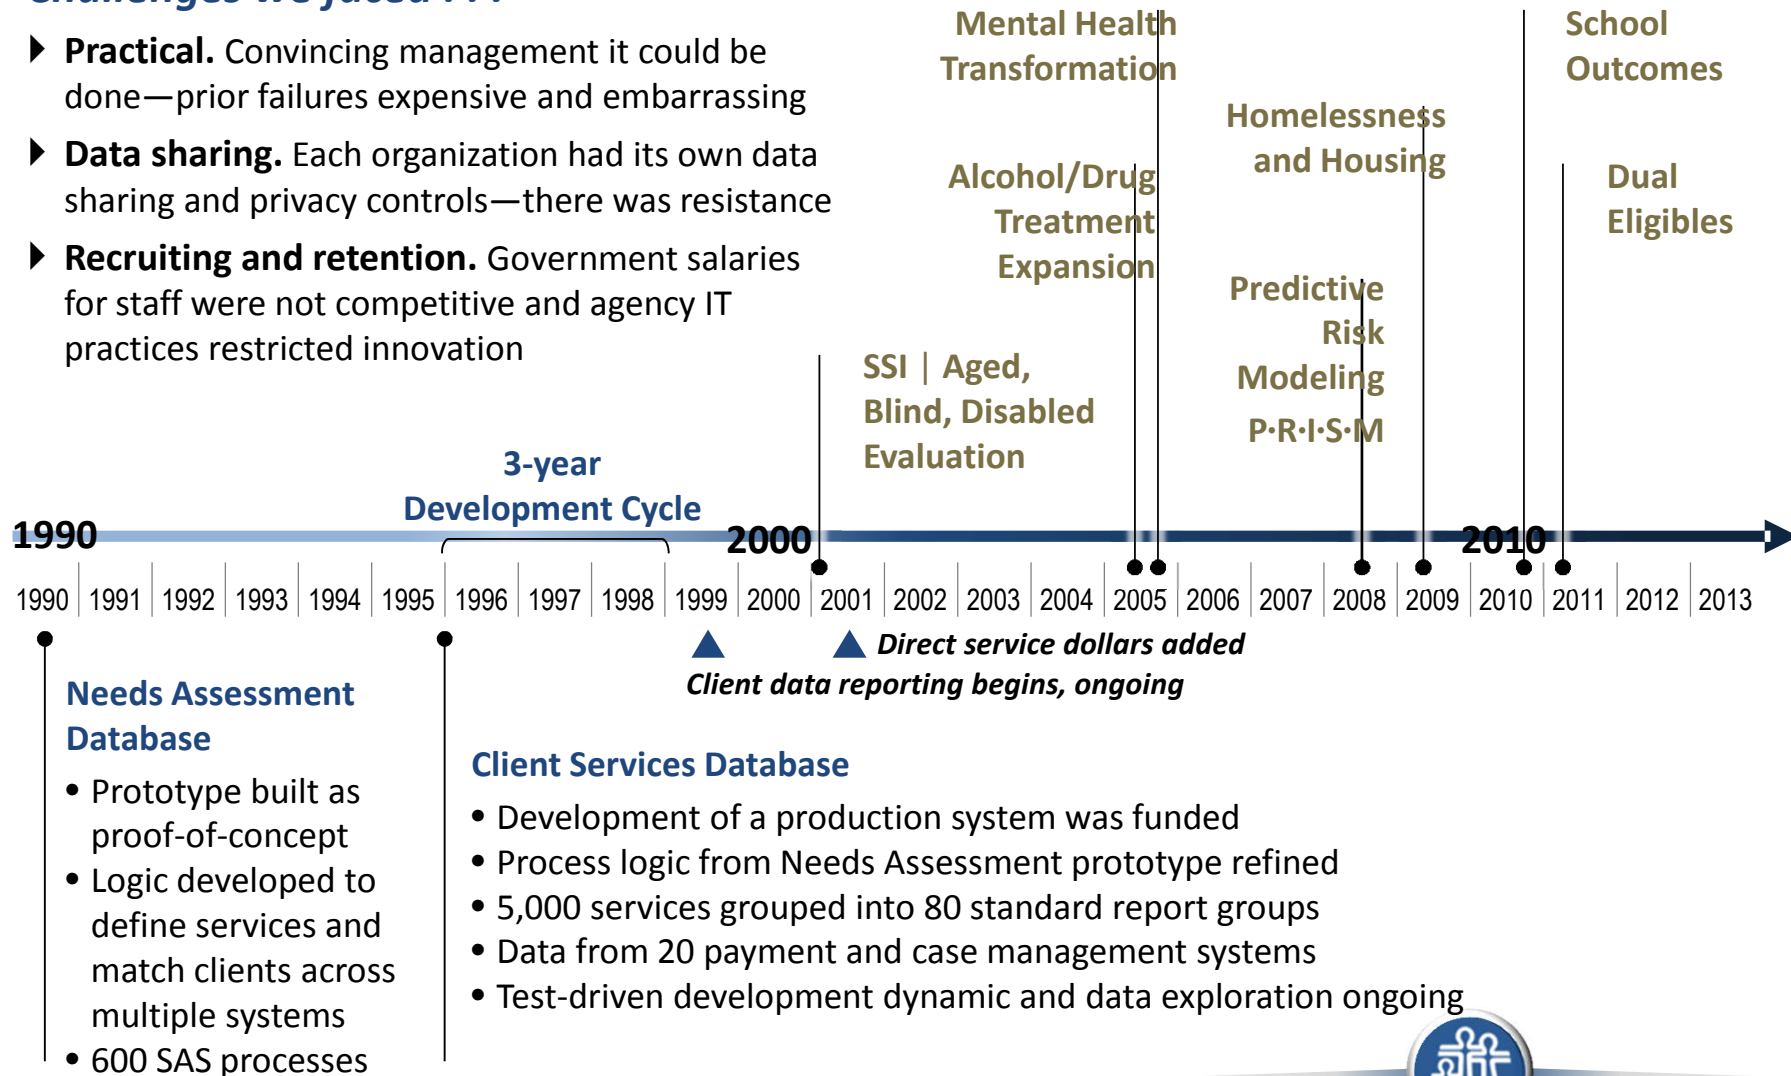

How did we get here?

— Leveraging investments over time —

Challenges we faced . . .

- ▶ **Practical.** Convincing management it could be done—prior failures expensive and embarrassing
- ▶ **Data sharing.** Each organization had its own data sharing and privacy controls—there was resistance
- ▶ **Recruiting and retention.** Government salaries for staff were not competitive and agency IT practices restricted innovation

Sustainability

— Lessons learned from our 20+ year experience—

Sustaining this capacity will always be a challenge

▶ **Analytical capability informed by close proximity to policy and program**

- Many vendors can organize data into databases with Business Intelligence tools that push the hard analytical work back on the end user
- Our survival advantage is that we have the analytical capability and subject matter expertise to extract meaning from complex social and health service data
- With recent budget shortfalls, we've become more entrepreneurial in developing internal funding while also developing more federal grant and private foundation funding

Health and social service programs and technologies are always evolving

▶ **We need to be continuously learning**

- Maintaining an understanding of changing programs and source IT systems is the main threat to sustainability
- Need to stay on top of technologies to manage and analyze complex, longitudinal data

Attracting and retaining talented staff is critical

▶ **Our key investment is in our staff**

- Where we are sometimes unable to offer competitive salaries, we can offer flexibility and the opportunity to make a real difference in peoples' lives
- We translate data into practical products that directly inform policy making or service delivery
